

Broadcom Named a Leader in the Gartner Magic Quadrant for Application Performance Monitoring Suites for Second Consecutive Year

March 22, 2019

Broadcom Believes It Delivers on Market-leading Monitoring and Analytic Capabilities Across Distributed Cloud Environments

SAN JOSE, Calif., March 22, 2019 (GLOBE NEWSWIRE) -- [Broadcom Inc.](#) (NASDAQ:AVGO) today announced that it has been named a Leader in the [Gartner Magic Quadrant for Application Performance Monitoring](#) for the second consecutive year* for its CA Digital Experience Insights platform.

[Digital Experience Insights](#) includes [operational intelligence](#), monitoring for [application performance management \(APM\)](#), [user experience](#) and [infrastructure monitoring](#), and [automation](#) for self-remediation.

"We are pleased that our APM suites, as part of our AIOps solution, have been recognized once again as a Leader by Gartner," said Ashok Reddy, Senior Vice President and General Manager, Enterprise Software Division at Broadcom. "This offering combines advanced machine learning at enterprise scale, with concurrent use for multi-cloud environments whether deployed on public or private cloud. Now, with the strength, vision and investment of Broadcom, and the new flexible Portfolio License Agreement, we can deliver the best AI-driven operations solution, providing the best digital experience for omnichannel with greater business insights and self-remediation."

Broadcom is currently the only vendor in the market to combine application, infrastructure, network monitoring and machine learning analytics with automated service orchestration, helping users solve complex IT issues including performance, capacity and configuration before they impact the business.

According to Gartner, "APM vendors are expanding their support for hybrid and multi-cloud infrastructure, business processes, machine learning and automated root cause analysis. I&O leaders must balance their desire for these needed capabilities with ease of use and automation support when selecting an APM suite."

"Through continued investment and focus on foundational architecture, we have modernized our AIOps offerings to ensure that we are at the forefront of the industry. Our solution's advanced capabilities are designed to help enterprises deliver a superior user experience to their end customers, whether they run on-premise, in the cloud or in a hybrid environment," continued Reddy. "Our APM suites provide the flexibility enterprises demand by incorporating open-source technologies and leveraging containers and microservices to expedite the development cycle and increase customer deployment options."

Broadcom's [AIOps solution](#) leverages new, innovative AI, machine learning and automation capabilities. The platform normalizes, correlates and analyzes the rapidly increasing volume and variety of IT operational data across the digital delivery chain. Seamlessly spanning cloud to mainframe, it provides for superior user experiences, while speeding innovation and increasing IT efficiency. Together with the rest of the Enterprise Software portfolio, these tools help enterprises realize the potential of their digital transformation initiatives, improve their technology, and enhance the end-user experience.
