## Section 1 — Conflict Minerals Disclosure

Brocade Communications Systems, Inc. (“Brocade” or the “Company”) is a leading supplier of networking hardware and software, including Storage Area Networking solutions and Internet Protocol networking solutions for businesses and organizations worldwide. Brocade’s end customers are private sector and public sector organizations of many types and sizes, including global enterprises that use the Company’s products and services as part of their communications infrastructure, and service providers such as telecommunication firms, cable operators, and mobile carriers who use the Company’s products and services as part of their production operations. Brocade offers a comprehensive line of high-performance networking hardware and software products as well as services that enable businesses and organizations to make their data centers and networks more efficient, reliable, and adaptable to the changing demands of new network traffic patterns and volumes. Brocade’s products and services are focused on meeting the stringent requirements necessary for data center infrastructure and applications. Many of the Company’s products have been designed to enable customers to deploy next-generation data center architectures and technologies, which the networking industry refers to as the New IP, including virtualization, cloud computing, software-defined networking, and Network Functions Virtualization.

For calendar year 2014 (“CY 2014”), Brocade determined that “conflict minerals”<sup>1</sup> are necessary to the functionality or production of products that it manufactured and contracted to manufacture. Accordingly, Brocade conducted a reasonable country of origin inquiry (“RCOI”) as described further below and is providing this Report on Form SD.

### Item 1.01 Conflict Minerals Disclosure and Report

Based on Brocade’s determination that certain conflict minerals are necessary to the functionality or production of a product or products that it manufactured or contracted to have manufactured in CY 2014, Brocade conducted an RCOI to determine whether any of those conflict minerals originated in the Democratic Republic of the Congo or an adjoining country<sup>2</sup> (together, “covered countries”). Brocade does not obtain any conflict minerals directly from mines or from smelters or refiners where ores are processed; all conflict minerals that may be present in a product manufactured by Brocade are the result of incorporating various parts and components of those products that are obtained from its suppliers. Therefore, the RCOI that was conducted by Brocade included obtaining information from Brocade’s suppliers who provide the parts and components that are likely to contain one or more conflict minerals. This information included declarations regarding the presence of conflict minerals in products sold to Brocade, the smelters where such conflict minerals were processed, and to the extent such information was available, the mines of origin for any conflict minerals. The procedures used by Brocade to complete its RCOI are described in more detail in Exhibit 1.01 - Conflict Minerals Report.

Based on the results of its CY 2014 RCOI, Brocade had reason to believe that certain parts or components of one or more of its products may contain conflict minerals from a covered country and may not be from recycled or scrap sources. As a result, Brocade conducted due diligence activities that were based on guidance developed by the Organisation for Economic Cooperation and Development, an internationally recognized due diligence framework. The specific due diligence activities undertaken by Brocade are described in more detail in Exhibit 1.01 - Conflict Minerals Report.

---

<sup>1</sup> Defined in Section 1502(e)(4) of the Dodd-Frank Wall Street Reform and Consumer Protection Act (“Act”) to include columbite-tantalite, also known as coltan (the metal ore from which tantalum is extracted); cassiterite (the metal ore from which tin is extracted); gold; wolframite (the metal ore from which tungsten is extracted); or their derivatives.

<sup>2</sup> Defined in Section 1502(e)(1) of the Act as a country that shares an internationally recognized border with the Democratic Republic of the Congo (“DRC”). As of the date of this filing, this includes Angola, Burundi, Central African Republic, the Republic of the Congo, Rwanda, South Sudan, Tanzania, Uganda, and Zambia.

Following the completion of its due diligence activities, Brocade determined that one or more conflict minerals are present in parts obtained by Brocade from certain suppliers. Based on relevant supplier declarations and smelter information, Brocade believes that the conflict minerals contained in parts obtained from some suppliers have been sourced from smelters designated as conflict free by the Conflict Free Sourcing Initiative (“CFSI”)<sup>3</sup> or came from scrap or recycled sources. However, in the course of completing its RCOI and due diligence activities, Brocade determined that certain of its suppliers:

- did not provide complete information regarding the origin of the conflict minerals in their products;
- responded that they were unable to determine the origin of certain conflict minerals in their products; or
- reported that they are sourcing conflict minerals from smelters or refiners that have not undergone an audit by the CFSI or another agency to be validated as conflict free or they are active in the conflict-free smelter program but the audit has not been completed; as such, the actual source of supply for these facilities has not been confirmed.

Therefore, for conflict minerals contained in parts obtained from these suppliers, Brocade has concluded that it is unable to determine the source of conflict minerals, including whether the conflict minerals came from recycled or scrap sources.

Brocade produces networking equipment. As discussed above, Brocade believes that the sources of the conflict minerals contained in its products are (i) smelters designated as conflict free by the CFSI, (ii) smelters that have not been designated as conflict free by the CFSI, (iii) scrap or recycled sources, and (iv) other indeterminate sources. As such, for CY 2014, Brocade has determined that its networking equipment is DRC conflict undeterminable and, as required by 17 CFR 249b.400, Brocade prepared a Conflict Minerals Report, which is provided as Exhibit 1.01.

Brocade’s Form SD and Conflict Minerals Report are posted on its publicly available Internet websites at <http://www.brocade.com/company/corporate-responsibility/corporate-citizenship/supply-chain/index.page>.

---

<sup>3</sup> CFSI, through its Conflict-Free Smelter Program, provides an independent, third-party audit of smelters and refiners, which are then validated as “conflict-free” in accordance with certain global standards. Lists of smelters and refiners that have successfully undergone an audit and meet the required standards are published on CFSI’s website: [www.conflictreesourcing.org](http://www.conflictreesourcing.org). Brocade’s determination was based on a comparison of the list of smelters reported by its suppliers with versions of these lists that were posted by CFSI as of April 10, 2015.

## 1 Introduction

In 2010, the United States enacted the Dodd-Frank Wall Street Reform and Consumer Protection Act (the “Dodd Frank Act”). Section 1502 of the Dodd Frank Act specifically relates to “conflict minerals” and adds Rule 13p-1 to the Securities Exchange Act of 1934, as amended. Rule 13p-1 and Form SD adopted by the Securities and Exchange Commission (“SEC”) require companies subject to Rule 13p-1 to perform certain procedures to determine the source of “conflict minerals”<sup>1</sup> that are determined to be necessary to the functionality of the products such companies manufacture or contract to manufacture. Specifically, companies are required to determine whether the conflict minerals used in their products originated in the Democratic Republic of the Congo (“DRC”) or an adjoining country (together, “covered countries”), to determine whether armed groups directly or indirectly benefitted as a result, and to disclose information about the due diligence procedures the company performed.

Brocade Communications Systems, Inc. (“Brocade” or the “Company”) has determined that certain conflict minerals are necessary to the functionality or production of a product or products that it manufactured in calendar year 2014 (“CY 2014”). Based on that determination, Brocade conducted a reasonable country of origin inquiry (“RCOI”) to determine whether any of those conflict minerals originated in the covered countries. Based on the results of its CY 2014 RCOI, Brocade had reason to believe that certain parts or components of one or more of its products may contain conflict minerals from a covered country and may not be from recycled or scrap sources. As a result, Brocade conducted the due diligence activities described in this report. Following the completion of those due diligence activities, Brocade determined that its applicable products were DRC conflict undeterminable (as defined in the rules and regulations of the SEC).

---

<sup>1</sup> Defined in Section 1502(e)(4) of the Dodd-Frank Wall Street Reform and Consumer Protection Act (“Act”) to include columbite-tantalite, also known as coltan (the metal ore from which tantalum is extracted); cassiterite (the metal ore from which tin is extracted); gold; wolframite (the metal ore from which tungsten is extracted); or their derivatives. Brocade refers to these materials as “3TG”.

## 2 Due Diligence

## 2.1 Brocade's RCOI and Due Diligence Process

As an original equipment manufacturer, Brocade is many steps removed in the supply chain from the smelters that process the minerals used in its products and from the mines of origin for the minerals. Therefore, Brocade determined that it is reasonable for the Company to expect its suppliers to identify those "upstream" companies, namely, the smelters or refiners that represent the sources of 3TG in its supply chain. Brocade's approach to due diligence was integral to its RCOI process and relied heavily on developing and responding to a clear understanding of the conflict minerals risk inherent in its supply chain. Brocade aligned with the conflict minerals tools and processes developed by the Conflict Free Sourcing Initiative ("CFSI"), a consortium of the Electronics Industry Citizenship Coalition ("EICC"), and the Global e-Sustainability Initiative ("GeSI"), specifically:

- the industry standard Conflict Minerals Reporting Template ("CMRT") for surveying Tier 1 and Tier 3 suppliers for critical conflict minerals information, including identification of all smelters in their supply chains
- the list of "known" smelters with assigned identification ("ID") numbers provided as part of the CMRT
- the Conflict Free Smelter ("CFS") audit program, under which CFSI is sponsoring audits of the smelters utilizing a standard audit protocol to determine whether a smelter is conflict free, and the published list of smelters who are certified under the CFS program, which is available at: [www.conflictreesourcing.org](http://www.conflictreesourcing.org), and is updated periodically

Brocade utilized the most current version of the CMRT developed for CY 2014 reporting (version 3.02 as of the writing of this report) to collect information on 3TG in its supply chain, reviewed the information, exercised due diligence where appropriate, including pressing for more detailed and transparent information from certain suppliers, and conducted desk top audits of a select group of suppliers. Following the completion of its RCOI, Brocade determined that at least some of the 3TG in its supply chain may have originated in the covered countries. As a result, Brocade conducted the due diligence activities described below.

By definition, due diligence is a series of reasonable steps that are taken to satisfy a specific requirement. In this case, the objective of those reasonable steps for Brocade was not only to comply with the SEC final rule, but to develop a position of social responsibility with respect to addressing the conflict minerals risk in its supply chain. To achieve these objectives, Brocade adopted a due diligence process based on the five-step due diligence framework described in the Organisation for Economic Co-operation and Development ("OECD") guidance and related supplements. These steps included:

1. Refining and continuing to implement the Company management system developed in 2013 to manage conflict minerals in its supply chain
2. Understanding the conflict minerals risk in its supply chain through the RCOI and risk assessment processes
3. Responding to identified risks through continued supplier engagement
4. Reviewing the supply chain risks, including desk top audits of certain suppliers, and influencing the nature of its supply chain with respect to mitigating conflict minerals risk
5. Documenting its due diligence process and the outcome to support preparation of SEC reporting and public disclosure of its conflict minerals information

The activities undertaken by Brocade to complete each of these steps are described in the following sections.

## 2.2 Company Management System

In 2013, Brocade developed an internal management system that supports its compliance with the conflict minerals rule, addresses its customers' needs for a conflict free supply chain, and implements a reasonable approach to understanding the conflict minerals risks in its supply chain. The management system includes the following elements:

- A Brocade Conflict Minerals Statement that was developed and approved by key stakeholders, communicated internally, and is posted on the Company's external website at: [http://www.brocade.com/downloads/documents/company\\_information/corporate-responsibility-conflict-mineral.pdf](http://www.brocade.com/downloads/documents/company_information/corporate-responsibility-conflict-mineral.pdf). The text of Brocade's statement is presented below:

Brocade recognizes the adverse effects associated with mining columbite-tantalite, cassiterite, gold, wolframite or their derivatives (collectively referred to as "conflict minerals") in the Democratic Republic of the Congo and adjoining countries. Brocade is committed to sourcing minerals for our products in a manner that does not directly finance armed groups perpetrating serious human rights abuses in the Democratic Republic of the Congo or an adjoining country. In addition, Brocade is committed to complying with Section 1502 of the Dodd-Frank Wall Street Reform and Consumer Protection Act and with a nationally or internationally recognized framework for conflict minerals due diligence, as applicable. Brocade expects our suppliers to exercise due diligence on the source and chain of custody of conflict minerals in the products they manufacture, to make their due diligence measures and information available to Brocade on request, and to source minerals from responsible sources that do not contribute to human rights abuses in the Democratic Republic of the Congo and adjoining countries. Brocade will comply with the reporting requirements of Section 1502 of the Dodd-Frank Act, including making information regarding conflict minerals available to the public.
- A strategy for compliance with the SEC final rule that included establishing roles and responsibilities, developing and implementing a CY 2014 Conflict Minerals Implementation Plan, and updating the internal Conflict Minerals Standard Operating Procedure ("SOP"). The Conflict Minerals Implementation Plan includes the scope of the program and approach used for compliance with the SEC rule; responsibilities for implementing the plan; a description of the process Brocade followed to complete its RCOI, due diligence, and SEC reporting requirements; a conflict minerals process flow diagram; and an implementation schedule. The SOP describes Brocade's conflict minerals risk-based due diligence and management system approach to support Brocade's goal that its supply chain does not contribute to human rights abuses and conflict in the DRC and adjoining countries.
- On a quarterly basis or more frequently, if needed, Brocade engaged with its customers to understand their approaches to managing conflict minerals and to ensure Brocade provided appropriate and responsive information.
- A resource plan was developed that identified both internal and external resources and responsibilities for implementing various aspects of Brocade's conflict minerals strategy.
- Brocade assigned business functional group responsibilities for conflict minerals to specific Brocade employees, held meetings with those employees to explain what was needed, and developed an internal Plan of Record for CY 2014 that served as a formal re-commitment by the Company to implement its conflict minerals program and established expectations for accountability.
- Brocade retained an outside contractor, a professional consulting firm experienced in conflict minerals data collection and analysis, to provide the means and methods to implement its good faith RCOI and due diligence process.

- Brocade implemented an RCOI process that involved collecting and evaluating completed CMRTs from its suppliers who were actively engaged in providing products to Brocade during CY 2014 that were likely to contain 3TG. Supplier information was subject to the due diligence process as described in this report. Brocade held its suppliers responsible for providing the information needed to support the RCOI and due diligence processes at both the corporate level and the procurement level. Suppliers who were reluctant to provide the required information were escalated to Brocade’s supply base management team, which provided direct support of the RCOI process, to achieve the maximum supplier response. This resulted in receiving a response from 100% of all of the in-scope suppliers and all of the suppliers submitting completed CMRTs. This is an improvement over the RCOI results for calendar year 2013 (“CY 2013”) where only 96% of Brocade’s in-scope suppliers submitted completed reporting templates.
- Internal and external communications were developed by Brocade that describe its Company statement and conflict minerals strategy and program to employees, suppliers, investors, customers and other interested stakeholders. The communication includes the Conflict Minerals Statement on its publicly available website at: [http://www.brocade.com/downloads/documents/company\\_information/corporate-responsibility-conflict-mineral.pdf](http://www.brocade.com/downloads/documents/company_information/corporate-responsibility-conflict-mineral.pdf), presentations, outbound CMRTs, supplier communication letters and e-mails, and training programs.

## 2.3 Supply Chain Risk Assessment

Brocade used the CMRT version 3.02 (and its associated list of smelters with assigned ID numbers) and the CFSI’s published list of smelters in the CFS program (as updated periodically) as the platform for suppliers to communicate information regarding 3TG and country of origin. A two-part review process was conducted on the CMRTs received from suppliers: Part 1 was a completeness review, and Part 2 was a risk review that included various risk assessment paths and follow-up actions.

The completeness review focused on whether each supplier provided all of the required information in the detail expected and on the correct version of the CMRT. Templates found to be incomplete or on the incorrect version of the CMRT were returned to the suppliers who were requested to resubmit them with all of the required information.

The risk review, which included an evaluation of six risk “paths”, was conducted following the completeness review. The primary objective of the risk review was to evaluate whether a supplier’s responses could be considered to be credible such that Brocade could effectively implement its conflict minerals strategy and policy, including meeting the requirements of the SEC final rule.

The six risk “paths” included the following:

- Path A - The supplier’s declared smelter was not on the CMRT drop down list, i.e., the declared smelter is not “valid.”
- Path B - The supplier’s declared smelter was on the drop down list, but is not on the CFSI CFS list.
- Path C - The supplier’s declared smelter is on a Brocade customer watch list.
- Path D - The supplier had not identified all of its smelters.
- Path E - The supplier does not have key management systems in place.
- Path F - The supplier reported conflict minerals from conflict countries.

The risk review was conducted in a manner to identify:

- supplier responses for which it was not reasonable to believe the information provided
- key issues for which supplier follow-up was needed to meet Brocade’s program objectives and customer requirements
- issues which may pose a business risk to Brocade

## 2.4 Response to Identified Risks

Based on the results of the risk review, suppliers were asked to provide additional information or resubmit their templates to address identified issues. The suppliers’ responses to requested follow-up actions and requests for additional information were reviewed by Brocade and, where necessary, an appropriate response on Brocade’s part was initiated. In some cases, the outcome of these additional actions by certain suppliers did not completely address the identified risks resulting in identification of suppliers that do not meet Brocade’s expectations with respect to its conflict minerals statement. These suppliers will be included in a corrective action program that will be implemented during Brocade’s calendar year 2015 (“CY 2015”) conflict minerals RCOI and due diligence process.

## 2.5 Smelter Verification

Based on the smelter information provided by the in-scope suppliers on the completed CMRTs, two lists of smelters were compiled. The “known” smelter list included those smelters that have been evaluated by CFSI, determined to be smelters, and assigned a smelter ID number. This list of smelters was compared to the CFSI’s list of CFSs and a notation was made regarding which smelters were determined to be CFS.

The “unknown” smelter list included those smelters identified by suppliers in their CMRTs that did not have smelter ID numbers. This list was subjected to additional review to attempt to determine whether the companies identified were actual smelters. The review included direct contact with the companies when contact information was provided by a supplier or could otherwise be identified, review of any additional information provided by the smelter, and a search for publicly available information regarding each company via the internet. When the supporting information indicated that an identified company was engaged in smelting operations, it was identified as a smelter.

The final list of smelters reported to Brocade, including CFS designations, is provided in Appendix A.

## 2.6 Risk Review/Desk Top Audits

Based on the outcome of the risk review and any follow-up actions, Brocade selected a group of suppliers to participate in “desk top” audits. The objective of these audits was to further evaluate the information provided regarding the source of any conflict minerals reported.

The audits were conducted by an experienced auditor from Brocade’s outside contractor, who was independent of the data collection process, and included the activities described below.

1. Prioritized suppliers based on the information provided in their CMRTs and finalized list for the audits
2. Created “rules” for the audit team
3. Initiated the audit process

4. Contacted suppliers selected for audit
5. Reviewed all information provided by each supplier
6. Independently verified supplier information to the extent possible:
  - Reviewed each supplier's company website regarding its conflict minerals policy and other relevant information that is publicly available
  - Checked for other publicly available information (e.g., information on identified smelters)
  - Checked the status of smelters in the CFS program
7. Requested follow up information from each supplier, including:
  - Questionnaire regarding conflict minerals management system, how they derived their information on the CMRT, source of supply, and to ascertain whether the metal(s) could have come from scrap or recycled sources
  - Additional smelter information, if needed
8. Evaluated whether each supplier is sourcing materials from a conflict country that is benefitting armed groups
9. Prepared an audit report

## 2.7 CY 2015 Activities

Brocade will conduct its CY 2015 RCOI process by sourcing conflict minerals data from all of its active suppliers that were included in the CY 2014 process and will expand the scope of the project to include additional suppliers (new suppliers or suppliers that provide new parts) as needed. In addition, Brocade is developing and will implement corrective action plans for certain groups of suppliers that did not meet Brocade's expectations as identified in its conflict minerals statement. The corrective action plans will be designed to reinforce Brocade's expectations for its suppliers to provide better and more detailed information regarding the source of any conflict minerals in their products, to source minerals from CFS smelters, and to encourage non-CFS smelters to undergo certification as conflict free.

### 3 Product Description

Brocade produces networking equipment. Brocade believes that the sources of the conflict minerals contained in its products are (i) smelters designated as conflict free by the CFSI, (ii) smelters that have not been designated as conflict free by the CFSI, (iii) scrap or recycled sources, and (iv) other indeterminate sources. As such, for CY 2014, Brocade has determined that its networking equipment is DRC conflict undeterminable.

Because Brocade is many times removed from the origin of any conflict minerals in its supply chain, it relied on information provided by its suppliers regarding the facilities used to process conflict minerals, the country of origin of the conflict minerals, and the specific mine or location of the minerals' origin. Using CMRTs, Brocade collected information regarding the facilities used to process conflict minerals (i.e., smelters or refiners) from its supply chain. Approximately 18% of Brocade's in-scope suppliers were not able to provide sufficient information for Brocade to determine the country, mine, or location of origin of the conflict minerals in products sold to Brocade. This is a substantial improvement over our CY 2013 results where 34% of Brocade's in-scope suppliers were not able to clearly identify the source of conflict minerals in their products.

The list of smelters identified by Brocade's in-scope suppliers is provided in Appendix A. This list includes "known" smelters (i.e., smelters that have an ID number that was assigned by CFSI, known smelters or refiners that have been confirmed to be included on the CFSI's CFS list (as of April 10, 2015), and facilities that do not currently have smelter ID numbers, but have been determined through Brocade's verification process to be engaged in smelting operations for the specified metal. Based on Brocade's CY 2014 smelter list:

- There are 319 smelters included on the list
- 61% of the smelters reported by Brocade's suppliers are either conflict free or are active in the CFS program; in CY 2013, only 21% of the smelters were identified as conflict free
- 93% of the reported tantalum smelters are conflict free; in CY 2013, only 62% of the tantalum smelters were conflict free
- 64% of the reported tungsten smelters are conflict free; in CY 2013, only 4% were conflict free
- 57% of the reported gold smelters are conflict free; in CY 2013, only 24% were conflict free
- 51% of the reported tin smelters are conflict free; in CY 2013, only 7% were conflict free
- 19% of the total smelters reported to Brocade do not have ID numbers assigned by CFSI; in CY 2013, 30% of the total smelters reported did not have assigned ID numbers
